

Using Biolink™ Compost Starter couldn't be easier

Enrich your soil and create the perfect environment for plant growth in four easy steps.

- 1** Sprinkle 2 tablespoons - or 40 to 50 grams to 1/2 cubic metre - of material into your compost container.
- 2** Water your compost so it's damp and give it a gentle turn after sprinkling. Avoid adding too much water. Your worms won't like it and it creates anaerobic conditions not ideal for good compost.
- 3** For best results, combine food scraps with green waste from your garden, such as grass clippings, leaves, and twigs - even a bit of shredded paper.
- 4** Continue to turn over compost materials twice a week for three weeks.
- 5** Your compost is ready to use on your garden.

Available in 200g sachet

™ is a Trade Mark of
Biolink 4 Plants Pty Ltd

Nurture yourself. Grow your own food.

Biolink4Plants was created by two farming families with years of hands-on experience in agriculture.

Whether you're growing a few veggies in your backyard or in small pots on your apartment verandah, making the effort to be self-sustaining is a satisfying one.

We produce a range of 100% organic products to promote plant growth and help support your veggie patch or floral garden.

Biolink™ Compost Starter helps you create ready-to-use fertiliser that enriches the soil and creates a perfect environment for your plants to thrive.
