

BIO-HUM Soil Drench Soluble Fertiliser Additive

Biolink™ Bio-Hum Soil Drench is a 100% natural soluble probiotic fertiliser additive that stimulates plant growth and soil health on your farm.

- Biolink™ BIO-HUM Soil Drench is a bio-stimulant. It increases the plant availability of essential nutrients such as N, P, K and S.
- The soluble humic fulvic acid in Biolink BIO-HUM enhances soil fertility, allowing nutrients to be held in the soil rather than being locked up or lost into the air or through leaching.
- Develops and increases the beneficial fungi to increase nutrient cycling.

Directions for use:

Safe and easy-to-use all year-round. Using spray equipment, we recommend you apply 50kg urea + 2kg of Bio-Hum to every fertiliser round; apply 2kg/ha per application.

NOTE: Biolink does not guarantee yield or performance.

GUARANTEED MINIMUM ANALYSIS	
Nitrogen	2.9%
Phosphorus	0.72%
Potassium	2.64%
Sulphur	0.24%
Calcium	0.09%
ACTIVE INGREDIENTS	
Mill mix (grain byproduct), humic fulvic acid & microbial inoculants	

Available in 20 kg & 1 tonne bag

Biolink™ BIO-HUM Soil Drench Soluble Fertiliser Additive:

1. **Helps release the stored Phosphorus in your soil.** Trials have shown that when humic fulvic acids are applied in combination with nutrients, phosphorus is released to plants.
2. **Develops and increases beneficial fungi to increase nutrient cycling.** Our trial work has shown that our comprehensive blend of beneficial microbes helps to significantly increase the beneficial fungi in soil over time.
3. **Develops and increases carbon, moisture-holding capacity, and aeration in the soil.** By increasing the carbon and boosting water-holding capacity in soils, crops and pastures' sustainability and growing season should increase.

Active ingredients: how they work

MILL MIX

A grain industry byproduct that's a readily available carbohydrate source.

HUMIC FULVIC

Used to enhance plant productivity by improving nutrient availability for carbon bonding and a fungal stimulant for the soil. Humic fulvic buffers excess salt and toxins in the soil. Humic and Fulvic are concentrated carbon sources.

MICROBES

A selection of microbes to stimulate plant growth and increase microbial activity in the soil. The ingredients in Bio-Hum activate the native microbes present in the soil.
